

Enclosure/Annexure 1

Chaudhary Charan Singh University, Meerut

Syllabus of:

M.Sc. (Botany), CCSU/**NEP**

(Online BoS held on 11.01.2024; Revised & effective from 2023-24 onwards)

(For both and fifth years of Higher education (PG))

(As per guidelines of U.P. Government in accordance with

National Education Policy-2020 w.e.f. the session 2023-2024)

(For both University Campus and Colleges)

43

Members from the Board of Studies

| S. No. | Name | Designation | College/ University |
|--------|---------------------------|-------------------------|---|
| 1. | Prof. Hanu Krishna | Dean, Science Faculty | C.C.S. University Campus, Meerut |
| 2. | Prof. Vijai Malik | Convener-I | Botany Department, CCS University, Meerut |
| 4. | Prof. Kap Narayan | Member | Botany Department, CCS University, Meerut |
| 5. | Dr. R. C. Arya | Convener-II | Meerut College, Meerut |
| 6. | Dr. Ashok Kumar | Member | M. M. H. College, GZB |
| 7. | Dr. (Mrs.) Poonam Paliwal | Member | IP College, Bulandshahr |
| 8. | Prof. Sundip Kumar | External Subject Expert | Department of Molecular Biology & Genetic Engineering, GBP University, Pant Nagar |
| 9. | Prof. Upendra Kumar | External Subject Expert | Department of Plant Science MJP Rohilkhand University, Bareilly |
| 10. | Prof. Navneet | External Subject Expert | Department of Botany & Microbiology, Gurukul Kangri University, Haridwar |
| 11. | Dr. Ashwani Goel | Retired Principal | Sahid Mangal Pandey Degree College, Madhyav Purna Meerut |
| 12. | Prof. Narendra Singh | Member | Head Department of Botany, KU, Kurukshetra |

SUBJECT: Botany (Outer BoS held on 11.01.2024); CBCS / N E P

Semester wise Titles of the Papers in M.Sc. (Botany)

| Year | Sem | Course Code | Paper Title | Core Compulsory/Elective/Value added | Theory/Practical | Credits |

| | | BO41012R | Industrial Training/ Research Project/Survey | Core Compulsory & Value Added | Project | 04 |

Subject Prerequisites: To study this subject a student must have had the subject(s) Botany at UG Level.

Course Structure: The courses will be based on Choice Based Credit System (CBCS) / **NEP** structure developed by the University. There will be four compulsory or elective core courses of Botany in each semester. Apart from these, one minor elective course of other subjects is to be chosen by a student in the first year of M.Sc. (Botany). In each semester, there will be one research project of 04 credits.

Programme (M. Sc.) Objectives:

This programme has been designed to train and enable students to understand the relationship between science and society as well as logical, scientific and ethical issues related to science. In addition to this, the students will be able to think critically for the formulation of hypotheses and experimental designing based on the scientific method, which will make the students readily employable in various streams of teaching, research, civil services and in industries.

Programme Specific Outcomes (PSOs): After completing M.Sc. (with Botany), the following will be the PSOs:

PSO-1: It is expected that after successfully completing M.Sc. Botany, students will develop deeper theoretical & Practical knowledge of different branches of Botany like Phytoecology, Plant taxonomy, Anatomy, Mycology, Microbiology, Physiology, Biochemistry, Cell biology, Genetics, Molecular biology, Medicinal Botany, Pharmacognosy, Environmental issues etc, making them capable of understanding the societal, environmental issues, demands and their solutions.

PSO-2: This program has a strong theoretical basis that will help students in evolutionary relationship of lower and higher plants by using the key characters which is expected from a student of Botany to support the other branches of knowledge related to plants.

PSO-3: Many of the courses in the programme have been carefully designed that will help the students for qualifying competitive exams like IAS, IFS, CSIR NET, SET, TGT, PGT and to write research proposals for grants.

PSO-4: Continuous internal assessment provides ample opportunity to the students for improvement after every evaluation. Seminar and field visits system ignites the personality of the students and enables

them to present oneself with confidence, develop a reasonably well compiled content and discuss. Assignments enable the students to compile the solutions of the given problems with optimal discussion.

PSO-5: In each semester of the programme, each student is given research project of their own choice to allow students to understand various steps of solving a research problem. Thus, this programme will help to develop research aptitude at PG level with identification of gaps in knowledge and relevance of their solutions for the society.

PSO-6: The student completing the course will be capable of evaluating research projects.

List of All Papers in AB Four Semesters (Online BoS held on 11.01.2024)

| Programme | Year | Semester | Course Title | Core Compulsory/ Elective/ Value added | Credit | Teaching Hours | | |
|-----------|--------|----------|--|---|--------|-------------------|--|--|
| M.Sc. | I | First | Microbiology | Core Compulsory | 04 | 60 | | |
| | | | Algae, Bryophytes, Pteridophytes and Gymnosperm | Core Compulsory | 04 | 60 | | |
| | | | Plant Systematics | Core Compulsory | 04 | 60 | | |
| | | | Any one of the following a. Applied Mycology b. Biostatistics | Core Elective | 04 | 60 | | |
| | | | Practical Lab I | Core Compulsory | 06 | 120 | | |
| | | | Industrial Training/ Research Project/ Survey | Core Compulsory& Value Added | 04 | 60 | | |
| | Second | Second | Disaster Management | Major-Open Elective for other subjects | 04 | 60 | | |
| | | | Genetics | Core Compulsory | 04 | 60 | | |
| | | | Cell biology | Core Compulsory | 04 | 60 | | |
| | | | Developmental Botany | Core Compulsory | 04 | 60 | | |
| | | | Any one of the following a. Elementary Biotechnology b. Phenotaxy c. Applied Physiology d. Stress Physiology of Plants | Core Elective & (b) Value Added | 04 | 60 | | |
| | | | Practical lab 2 | Core Compulsory | 04 | 120 | | |
| | | | Industrial Training/ Research Project/ Survey | Core Compulsory& Value Added | 04 | 60 | | |
| | | | Pasificating plants | Major-Open Elective for other subjects | 04 | 60 | | |

| Programme | Year | Semester | Course Title | Core Compulsory/ Elective | Credit | Teachin g Hours |
|-----------|------|----------|--------------|---------------------------------|--------|--------------------|
| | | | | | | |

| | | | | Value added | |
|-------|---|--------|---|---|--------|
| M.Sc. | B | Third | Medicinal Botany and Ayurvedic System of Medicine | Core Compulsory & Value Added | 04 60 |
| | | | Plant Biochemistry and Molecular Biology | Core Compulsory | 04 60 |
| | | | Environmental Chemistry | Core Compulsory | 04 60 |
| | | | Any one of the following 1. Genetic Engineering 2. Biochemistry Biology 3. Plant Nanotechnology | Core Elective | 04 60 |
| | | | Practical Lab 3 | Core Compulsory | 04 120 |
| | | Fourth | Industrial Training/ Research Project/ Survey | Core Compulsory & Value Added | 04 60 |
| | | | Environmental Issues & Challenges | Core Compulsory | 04 60 |
| | | | Entrepreneurial and Intellectual Property Rights | Core Compulsory | 04 60 |
| | | | Any one of the following a. Biophysical Chemistry b. Bioentrepreneurship and Innovation c. Molecular Systematics and Phylogenetics d. Nanobiotechnology | Core Elective (b) Value Added Entrepreneurship | 04 60 |
| | | | Any one of the following a. Glycobiology b. Plant Tissue Culture c. Microbial Biotechnology d. Herbal Products | Core Elective | 04 60 |
| | | | Practical lab 4 | Core Compulsory | 04 120 |
| | | | Industrial Training/ Research Project/ Survey | Core Compulsory & Value Added | 04 60 |

The types of paper, number of papers, credit for each semester and research project semester wise, as per guidelines of U.P. state govt. letter no. 401/sem-3-2022, dated February 09, 2023, as a part of NEP-2020 implementation in U.P. universities, have been prepared as above:

The maximum and minimum marks for such Theory paper, Practical papers (internal & external) and projects have been finalized according to the letter number-1032/affts-3-1625-R039/2024, dated 9 February, 2022. The basic structure of the programme related to types of paper, number of papers, credit etc have been finalized according to the letter of government dated July 13, 2022.

Core Compulsory Courses: These are main (major) courses of the subject which every student has to study who has taken admission in PG (First and Second Year).

Core Elective Courses: These are full major courses of the subject/programme. These courses will be selected by the students in I/2/3/4 (or 3R/3/10 in case of integrated PG) Semester. The Botany department of university/colleges will run these courses in their department/colleges according to their resources/ specialization of teacher and students may opt them according to their choice.

Minor Electives: Some of the above courses, or any other such course developed by BoS, can be taken as Minor electives by the students of other subjects, for multi-disciplinarity.

Value added courses: Some of the above courses, or any other such course developed by BoS, can be taken as Value Added course (Minimum 2 Credits/ 30 Hours) by the students of other Faculty/ Subject, for value addition, besides the courses which are not part of the curriculum/mark sheet of the Botany students are opted by the students of the Botany can be treated as an add-on to the basic requirement for compilation of a degree programme.

Marks Distribution and Teaching hours

The marks distribution for each core and elective will be as

Maximum marks: 100 (Internal assessment 30 marks + External Assessment 70 marks). Teaching hours for each of the course will be 60 hours. Duration of Theory and Practical examination of each paper shall be 3 hours. The distribution of Internal Marks will be as follows:

| Internal Assessment | Marks |
|--|-------|
| Class Instruction | 5 |
| Quiz | 10 |
| Seminar | 7 |
| Assignment(Charts/Plans/Statistical/Technology Demonstration/Field visits with report) | 8 |
| Total | 30 |

For Practical the distribution of marks will be as follow

| Internal Assessment | Marks |
|-------------------------------|-------|
| Physical Client Interaction | 5 |
| Viva Voce | 5 |
| Two practical based exercises | 10 |
| Charmode/ Collection | 10 |
| Total | 30 |

For External practical examination the distribution of marks will be as follow

| External Assessment | Marks |
|---|-------|
| Viva Voce on Practical's | 10 |
| Report of Botanical Excursion/ Lab Visits/Industrial training/ Survey/Collections/ Models with reports | 10 |
| Data work / Experiments | 40 |
| Practical Record file | 10 |
| Total | 70 |

Research Project

B.Sc. IV year will be equivalent to M.Sc. 1st year. At the end of the 2nd(even) semester (B.Sc. VIII semester or MSc. IInd semester) & 2nd/10th semester (M.Sc.), the candidate will submit a research project, which will be evaluated by an external examiner & internal supervisor along with a presentation and viva-voce examination.

In Fourth year (B.Sc.) or MSc first year and Fifth year (MSc final) the topic of the research project will be chosen from among the core compulsory courses/ elective courses of that year.

In each semester, each student will work 4 hour/ week/ semester for 4 credit. In this way a project work will be of 8 credits (i.e. 16 credits for two years).

Research project may be interdisciplinary/ multidisciplinary. It may be an industrial training/ internship/ survey work. Research project will be done under the guidance of the faculty member (ii) preferably having PhD degree. For this a co-supervisor may be chosen from a university, college, industry, research institute etc.

The research project will be of 100 marks. If any student publishes a research paper from his/her research project in a UGC care listed/Sugan indexed or Thomson meter, then he/she will get 25 extra marks (although maximum marks will not exceed more 100). The marks obtained in research project will be converted in grades and they will be counted in the calculation of CGPA.

Credits: MSc Programme will be run semester wise and choice based credit system.

MSc 1st year or B.Sc 4th year will be of 52 credits whereas MSc 2nd year will be of 48 credits. Each semester will be of 20 credits of courses (4 theory+1 practical, each will be of 4 credits) and thus the credits of two years (4 semesters) will be 80 credits.

A project work will be of 8 credits (i.e. 16 credits for two years). In other words it will be of 4 credits/semester i.e. a total of 16 credits.

A minor elective will be of 4 credits.

Thus M.Sc Programme will be of 100 credits (52+48).

Semester 1

| <p style="text-align: center;">Subject : M.Sc. Biology Ist Semester Course Title : Microbiology</p> | | |
|--|--|--------------------------|
| Course Code : B3140701T | | |
| <p>Course Objectives: The objective of this course is to make students aware about microbial world and its diversity along with their skill enhancement in microbial application for human welfare and development.</p> | | |
| <p>Course Outcomes: By the end of the course, the students should be able to:</p> <ol style="list-style-type: none"> 1. Assess the concepts of microbes and their diversity. 2. Evaluate methods for isolation, purification and cultivation of microorganisms from different sources. 3. Understand classification and growth pattern of bacterial cell. 4. Differentiate between virus, viroids, virooids and prions. | | |
| Credit : 4 | Core Compulsory | |
| Max Marks : 70 | Min. Passing Marks : 40 | |
| Total no. of Lectures-Tutorials-Practicals (6 hours per week)=4-0-0 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Introduction: Viral genetics and viral proteomics. Viral phylogeny. Virus database. A general account of various classifications including 16S rDNA sequencing. Evolutionary aspects of plant-microbe interaction. Growth & Nutrition: Microbial nutrition, growth kinetics and metabolism. | 15 |
| II | Agricultural Microbiology: Breeding for virus resistance, natural mechanism and transgenic strategies, relevance to Indian agriculture. RNA, Mycorrhiz, Microbial Minimization, Biocontrol of plant diseases. Environmental Microbiology: Biodegradation, Bioremediation, Microbes in nanotechnology, Biofertilizers. | 15 |
| III | Blast Parasite Interaction: Recognition and entry process of bacteria and virus into animal and plant host cell, Alteration of host cell and viruses. Virus induced cancer. Two component signalling systems, Chemotaxis, Quorum sensing. | 15 |
| IV | Antimicrobial Substances: Complement system, Interferons, Iron-binding proteins, Antimicrobial peptides. Resistance to Antimicrobial Drugs: Mechanism of resistance in microbes, Antibiotic misuse, Origin and evolution of virus like- covid-19. | 15 |

| Subject : M.Sc. Botany F st semester | | | | |
|---|--|--------------------------|--|--|
| Course Code : | Course Title : Plant Systematics | | | |
| Course Objectives: This course aims to add to understanding of the students about basic concepts of plant systematics, clades of Angiosperms. | | | | |
| Course Outcomes: The students will be learning | | | | |
| 1. What do we mean by systematics & Cladistics? What are different Types of clade? How to name the clades. Principles & Protologue of Phylogenetic 2. What are Characteristics, and Classification of Angiospermic clades 3. What are the sources of variations and how speciation takes place? 4. What are the data for molecular systematics. How phylogenetic analysis is carried out. What is DNA barcoding. | | | | |
| Credit : 4 | Core Compulsory | | | |
| Max Marks - 30+70 | Min. Passing Marks | | | |
| Total no of Lectures-Tutorials-Practicals (in hours per week) 4-3-0 | | | | |
| Unit | Topic | No. of Lectures (60 hrs) | | |
| I | Cladistics: Systematics (concept & definitions), Phylogeny & Ontogeny, Concept of Clade, Grade, Clu, Lineages, & Component of Cladograms, How to read the tree/Cladogram, Clades at different hierarchical level, Identification of Clade, Crown clade, and Total Clade, Evolutionary concepts: synapomorphy, parapomorphy, polyphyletic, plesiomorphy, apomorphy, anagenesis, cladogenesis, homology, analogy, homoplasy, parallelism and convergance, synapomorphy, synaplesiomorphy and Seraphomorphy, Apomorphies in Angiosperms. | 10 | | |
| II | Phylogenetic Tree: Principle & Principles (with explanation) of Phylogenetic Tree, Formation & Illustrations of Phylogenetic definitions and naming of clades, Spurrier, qualifying clause, Parts of protologue (complete monophyletic entry). Comparison of Traditional & Phylogenetic. Clades in Angiosperms: ANA/ANITA grade, Concept of Palaeotribes; Phylogenetic definition, Phylogeny and Characteristics/plesiomorphies of following clades: Monocotyledonae; Par-Angiospermeae; Apos-Angiospermeae; Angiospermeae; Magnoliidae; Monocotyledonae; Tricolpatae, Eudicotyledonae, Superwididae and Superasteridae. | 20 | | |
| III | Variation & Speciation: Variation: Definition, classification & Mechanism. Variation: Definitions, Types & mechanism. Speciation: Definitions, causes, types & model. Origin & Evolution of Flowering Plants. | 15 | | |
| IV | Data for Plant Systematics: Morphological & Molecular data, Structure and Role of Chloroplast Genome in Plant Systematics; Mitogenomics and Mitochondrial Genome in Plant Systematics; Nuclear Ribosomal DNA: Structure and uses in Systematics, DNA barcoding. | 15 | | |

| | | Subject : M.Sc. Botany - 3 rd semester Course Title : (a) Applied Mycology |
|--|--|--|
| Course Code : BEMT301AT | | |
| Objectives: | | |
| <ol style="list-style-type: none"> To understand the detailed structure of fungi To study the evolution of fungi. To study the economic importance of fungi | | |
| Course Outcomes: | | |
| <ol style="list-style-type: none"> Students will understand the every aspects of fungi. Students will able to endeavor the area of mushroom cultivation and be the future entrepreneurs. Students will able to use locally available strains of fungi as biocontrol agents. | | |
| Credits : 4 | Class Elective | |
| Max Marks : 10+70 | Min. Passing Marks : | |
| Total no of Lectures-Tutorials-Practicals (in hours per week): 3-8-0 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Diversity of fungi : General account of fungi, classification of fungi and contribution of scientists, Cultivation, Isolation and selection of some useful fungi Common genera - <i>Saccharomyces, Rhizopus, Penicillium, Aspergillus, Neurospora, Agaricus</i> | 15 |
| II | Detailed account of fungi: Isolation and multiplication of mycofungi, role in crop productivity and forestry. Phosphate solubilizing fungi. General account of mushroom cultivation -Agaricus bisporus, <i>Volvariella volvacea, Pleurotus ostreatus</i> . Medicinal and nutritional value of edible and medicinal mushrooms Effect of environmental, nutritional and chemical factors on mushroom cultivation. Genetic improvements in mushrooms. | 15 |
| III | Role of fungi in Biotechnology: Fermentation process and biomass production of fungi, growth kinetics, fermenter systems scale up. Yeast genome: Genetic analysis of yeast, Baker's yeast, food and feed yeast, industrial products (glycerol, adhesive, bio-polymer from yeast). Economic importance: Fungi in industry, Fungi in medicine, Fungi in agriculture, Fungi as food. | 15 |
| IV | Fungal pathology: Disease caused by fungi in plants, Fungi as human and animal parasites, Nematophagous fungi, entomopathogenic fungi. Exploitation of biocontrol agents by genetic manipulation. Management of fungal diseases. | 15 |

Suggested Readings:

1. Alexander, C.J., Mims, C.W. and Blackwell, M. (2007). *Introductory Mycology*. Fourth Edition, Wiley India Pvt. Limited.
2. Mehra, R.S. (2017). *Fruit Pathology*. 3rd Edition, McGraw-Hill Education, New Delhi.
3. Okafor, N. and Okere, B.C. (2018). *Modern Industrial Microbiology and Biotechnology*. 2nd Edition, CRC Press, Boca Raton.
4. Sethi, I.K. and Walla, S.K. (2018). *Text book of Fungi & Their Allies*. Second Edition, Mac Millan Publishers Pvt. Ltd., Delhi, India.
5. Webster, J. and Weber, R. (2007). *Introduction to Fungi*. Third Edition, Cambridge University Press, Cambridge and New York.
6. Wiley, J.M., Sherwood, L.M. and Woolverton, C.L. (2017). *Principles of Microbiology*, Fifth Edition, McGraw-Hill, USA.

| | | Subject : M.Sc. Botany I st semester |
|---|---|---|
| Course Code : | | Course Title : (b) Biostatistics |
| Objective: To study basic of statistics for Biology students. | | |
| Course Outcomes: After completion of this course, the students will be able to learn | | |
| 1. Presentation & Sampling | | |
| 2. Books of Correlation and Regression | | |
| 3. Variation and significance | | |
| 4. Experimental design for research purposes | | |
| Credits : 4 | Core Elective | |
| Max Marks : 40+30 | Min. Passing Marks : 40 | |
| Total no. of Lectures = Total hours - Prescribed (40 hours per week) (4-0-0) | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Presentation of Data: Frequency distributions; graphical presentation of data by histogram, frequency polygon, frequency curve and cumulative frequency curves. Sampling: Concept of population and sample; random sample; methods of taking a simple random sample. | 10 |
| II | Correlation and Regression: Bivariate data - multiple correlation and regression coefficients and their relation; Spearman rank correlation; limits of correlation coefficient; effect of change of origin and scale on correlation coefficient; linear regression and equations of line of regression; association and independence of attributes. | 15 |
| III | Tests of significance: Sampling distribution of mean and standard error; z and t-test (equality of means; paired and unpaired t-test); t-test for comparison of means when variances of two populations differ; Chi-square test for goodness of fit; independence of attributes, and homogeneity of samples; interrelation between t-test and F-Test | 20 |
| IV | Experimental Designs: Principles of experimental designs; completely randomized, randomized complete block design (missing plot value is RBD); Latin square design; augmented block design; simple factorial experiments (mathematical derivations not required); analysis of variance (ANOVA) and its use including estimation of LSD (CD) | 15 |

Suggested readings:

1. Mikucki, H. (2014). *Intuitive biostatistics: a nonmathematical guide to statistical thinking*. Oxford University Press, USA, [Amazon link](#).
2. Van Belle, G., Fisher, L. H., Fagerly, P. L. & Lankey, T. (2004). *Biostatistics: a methodology for the health sciences*, Vol. 519, John Wiley & Sons.
3. Lee, C. T. & Eberly, L. H. (2016). *Introductory biostatistics*. John Wiley & Sons.

| Subject : M.Sc. Botany 1 st semester | | |
|--|--|---------------------------|
| Course Code: | Course Title : Practical I, lab I | |
| Objective: To perform 20 experiments from the given list (at least 6 experiments from each units). | | |
| Course outcomes: After completion of this, the students will be able to learn: | | |
| <ol style="list-style-type: none"> 1. Isolation and culture of microbes. 2. Vegetative & reproductive part of cryptogam. 3. Taxonomic description and construction of phylogenetic trees. | | |
| Credits : 4 | Core Compulsory | |
| Max Marks : 25 Internal +75 External | Min. Passing Marks : | |
| Total no. of Lectures-Tutorial-Practical's = 10 hours per week 10-14 | | |
| Unit | Topic | No. of Lectures (120 min) |
| I | <ol style="list-style-type: none"> 1. Isolation and maintenance of pure cultures using common microbiological media. 2. Phytoplankton microflora- visualization and isolation. 3. Rhizosphere microflora- visualization and isolation. 4. Examination of gross character of bacteria. 5. Methods of isolation and culturing of bacteria or fungi: colony diameter; microscopic observations. 6. Study of reproductive structures of different genera of fungi. 7. Study of fungal physiology in pure culture - characterization of fungal colonies. 8. Study of as many as possible viral, bacterial and fungal diseases of crop plants (cereal, vegetable, fruit, and plantation) from surrounding habitats in Mysuru region. | 40 |
| II | <ol style="list-style-type: none"> 1. Study of vegetative and reproductive features of important algal groups with the available representatives: Chlorophyta, Charophyta, Euglenophyta, Chrysophyta, Cryptophyta, Pyrrophyta, Phaeophyta, and Rhizophyta. 2. Study of vegetative and reproductive features of important bryophyte groups with the available representatives - Hepaticae, Anthocerotae and Musci. 3. Study of vegetative and reproductive features of important Pteridophyte groups with the available representatives: Psilotales, Lycopodiales, Selaginellales, Isoetales, Equisetales, Ophioglossales, Marattiaceae, Onocleales, Filicales, Mettlesiales and Salviniales. | 40 |
| III | 3. Writing of technical descriptions. | 10 |

- Construction of keys.
- Identification of local species using Flora, Keys and ranges field trips.
- Identification of common families using diagnostic characters. Illustrate diagnostic characters.
- Construction of phylogenetic tree based on gene sequences available at NCBI database (which scientist may be gives different gene sequence).
- Construction of Chalogram on the basis of given characters.

Semester I

Industrial Training/Research Project/Survey (Value Added)

Course Code: BBA0707II (Research Project)

Duration: 60 Hrs.

Course Objectives: The objective of this course is to provide students with hands-on training in specialized area of plant science.

Course Outcomes: After completion of this course the students will acquire the following:

1. Training in experimental design and execution
2. Knowledge on techniques and tools of research
3. Designing of research proposal.
4. Writing of research work and review paper

Contents

The topic of the research project will be chosen from among the core compulsory courses/elective courses of that year.

| Subject : M.Sc. Botany, I st semester | | |
|---|---|--------------------------|
| Course Code: QBO10701T | Course Title : Disaster Management | |
| Course objectives: To learn management of disaster risk and act with reference to India. | | |
| Course outcome: After completion of this course, the students will be able to- | | |
| 1. Gain knowledge about foundation of hazards, disasters, associated natural/social phenomena and disaster management theory (cycle, phases). | | |
| 2. Understand Indian disaster management system, and role of NIDM. | | |
| 3. Develops understanding of Methods of community involvement as an essential part of successful DRR, value of familiarizing oneself before and after disaster and technological innovations in Disaster Risk Reduction: Advantages and problems. | | |
| 4. Take appropriate actions at all points in the disaster management cycle such as preparedness, better warnings, reduced vulnerability or the prevention of disasters during the next iteration of the cycle. | | |
| 5. Obtain, analyze, and communicate information on risks, relief needs and lessons learned from earlier disasters in order to formulate strategies for mitigation in future scenario with the ability to clearly present and discuss their conclusions and the knowledge and arguments behind them. | | |
| Credits : 4 | Minor/Open Elective for other subjects & Value Added | |
| Max Marks : 20/70 | Min. Passing Marks : | |
| Total no of Lectures-Tutorials-Practical's (in hours per week): 4-0-0 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Introduction to Disasters: definitions of Disaster, Hazard, Vulnerability, Resilience and risks; Disasters: Classification, natural hazards and Man-made disasters, Causes, Impacts (including social, economic, political, environmental, health, psychosocial). Global trends in disasters, urban disasters and climate change. | 15 |
| II | Disaster Risk reduction (DRR): Disaster management cycle-Phases, Disaster risk reduction four pillars of DRR viz (1) Disaster Prevention and Mitigation; (2) Disaster Preparedness; (3) Disaster Response; and (4) Disaster Rehabilitation and Recovery, National Disaster Risk Reduction and Management Council (NDRMC), Sendai framework for DRR. | 15 |
| III | Organizations of Disaster management: Role and structure of NDMA, NIDM, NDRF, SDRF, SIMA, SPDRR, UNDRR, PEMA and DM Act and Policy, Disaster Response Fund | 15 |
| IV | Disasters and Development: Impact of Development projects such as dams, embankments changes in Land-use, Climate Change. | 15 |

Suggested Reading:

1. David, A. (2009). *Introduction to Continuing Catastrophe*. Oxford University Press.
2. Andheria, J. (2008). *Vulnerability in Disaster Discourse*. JTCDM, Tata Institute of Social Sciences, Working Paper no. 8.

3. Blakie, P., Cannon, T., Davis, I., Wiener, B. (1997). *At Risk: Natural Hazards, Peoples Vulnerability and Disasters*, Routledge.
4. Damon, C. P. (2007). *Introduction to International Disaster Management*.
5. Nick, C. (1991). *Disaster Management: A Disaster Manager's Handbook*. Asian Development Bank, Manila Philippines.

Semester 2

| | | Subject: M.Sc. Botany 2 nd semester | | |
|--|--|--|--|--|
| Course Code : BB408B1T | Course Title : Genetics | | | |
| Course Objectives: The paper will deal with Mendelian and non-Mendelian inheritance. | | | | |
| Course Outcome: | | | | |
| The syllabus will provide an understanding of - inheritance of qualitative and quantitative traits. | | | | |
| 2. The syllabus will provide an understanding of - the structure and organization of different components of the eukaryotic genome. | | | | |
| 3. The unit will enable the students to learn about - mapping genes in bacteria and gene regulation in prokaryotes. | | | | |
| 4. The syllabus will also provide an understanding of - morphology of chromosomes and its relevance in genetics, Sex chromosomes and their role in sex determination, The basic concepts of epigenetics. | | | | |
| 5. After completion of this syllabus students will able to crack competitive examinations such as Agriculture Research Services, CSIR, IITR/NCBS, IISc (Bangalore), GATE, and JRF. | | | | |
| Credit : 4 | Core Compulsory | | | |
| Max Marks : 50+70 | Min. Passing Marks :- | | | |
| Total no of Lectures-Tutorials-Practical's (in hours per week)-4-0-0 | | | | |
| Unit | Topic | No. of Lectures (60 hrs) | | |
| I | Recent advances in Mendelian vs. non-Mendelian inheritance, quantitative and population genetics. Fine structure of genes. Prokaryotic gene regulation- operons, CRISPR-cas, sigma factors, micro RNAs. | 15 | | |
| II | Eukaryotic genome Components- repeated elements, transposons, organization and evolution. Eukaryotic gene regulation: cis and trans regulation processes, transcription factors, post-transcriptional regulation. Higher order structure of chromatin and its role in regulating different biological processes. | 15 | | |
| III | Genetic & physical mapping of genes in eukaryotes: Linkage and crossing over, molecular mechanism of recombination, molecular markers and construction of linkage maps. | 15 | | |
| IV | Cytogenetics and Epigenetics: Molecular structure of centromeres and telomeres; Sex determination in plants, sex chromosome, chromosomal aberrations. Introduction, methylation, histone modifications, histone code, Genome imprinting, Genome annotation and epialleles. | 15 | | |

Suggested Readings:

- Gupta P K (2009). Genetics. 4/e, Rastogi Publications, Meerut.

2. Gupta P K (2007). Genetics Classical to modern, Rastogi Publications, Meerut.
3. Griffiths et al (2008). An introduction to Genetic Analysis, Freeman & Co.
4. Hartl DL, and Jones EW (1997). Genetics: Principles and Analysis 4th Ed, Jones & Bartlett Publishers, Inc.
5. Hartwell L, et al (2000). Genetics: From genes to genomics, McGraw Hill, New Delhi.
6. Lewis B. (2007). Genes IX, Wiley Eastern Ltd., New Delhi.
7. Pierce, B. (2005). Genetics: A conceptual Approach 2nd Ed, WH Freeman
8. Snustad D P., Simmons NJ and Jenkins JB (2003). Principles of Genetics, John Wiley & Sons, New York.
9. Strickberger, N.W. (1985). Genetics 3rd Ed, Macmillan Co. New York.

| <p style="text-align: center;">Subject : M.Sc. Botany 2nd semester</p> <p>Course Code : BHAB0021 Course Title : Cell Biology</p> | | |
|--|---|--------------------------|
| Objectives: | | |
| <ol style="list-style-type: none"> 1. To understand the structure and function of the cell junctions. 2. To understand steps of cell signaling. 3. To understand molecular events during cell cycle. 4. To understand vesicular transport and protein targeting. | | |
| Course Outcomes: | | |
| Credit: 4 | Core Compulsory | |
| Max Marks: 30+70 | Min. Passing Marks: | |
| Total no. of Lectures-Tutorials-Practical's (in hours per week) 4-0-0 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Cell interactions: Extra cellular matrix, Cell adhesion molecules; cadherins, integrins, selectins, fibronectin, laminin and immunoglobulin superfamily. Cell-cell adhesion (homophilic and non homophilic adhesive mechanisms); anchoring junctions, anchoring junctions, communicating junctions (Connexons) and plasmodesmata. Membrane structure: Plasma membrane; the lipid bilayer, fluidity of the lipid bilayer; phospholipids, sphingolipids, cholesterol, glycolipids, salts, Membrane proteins, and membrane transport (Active & Passive). | 12 |
| II | Protein Targeting: Protein secretion, synthesis and targeting of mitochondria, chloroplast, Nucleus, & Peroxisomes. Posttranslational Modification of protein: Glycosylation in the rough Endoplasmic Reticulum and Golgi Complex. Vesicular Transport: Transport From the ER to the Golgi Complex; Transport of Materials through the Golgi Complex; Mechanism of transport to Lysosomes. Types of Vesicle Transport and Their Functions: COPII-Coated Vesicles; COPI-Coated Vesicles & Clathrin coated vesicles. Targeting Vesicles to a Particular Compartment: Movement, Tethering, Docking & Fusion of Vesicles with target membrane. | 15 |
| III | Cell Cycle: Overview of Cell Cycle Phases; Cell Cycle Checkpoints; Regulation of cell cycle: Positive regulation (Cyclin, Cdk, Phosphorylation/De-phosphorylation); Activation of cyclin-dependent kinases; Mechanisms of Cdk regulation; DNA replication licensing; CDK inhibitors; Maternally provided factors (MPF) Regulation; Negative | 15 |

| | | |
|----|--|----|
| | <p>Regulation: (Retinoblastoma protein (pRb); p53, (Mutations of p53). Protein Degradation in Cell-Cycle Control: SCF (Skp1-Cullin-F-box protein complex) and the APC (Anaphase-Promoting Complex). Structural Maintenance of Chromosomes (SMC): Spindle formation and its disengagement, mechanism of chromosome movement and separation during anaphase. Spindle Assembly Checkpoint and Progression to Anaphase.</p> | |
| IV | <p>Cell Signalling: General principle, ligands and receptors, types of cell signalling. Component of cell signalling. Features of signal-transducing systems. Types of signal transduction.</p> <p>Molecular switch: Kinase/Phosphatase Molecular Switch, GTPase Molecular Switch.</p> <p>G Proteins: G Cycle, G Protein-Coupled Receptors and Second Messengers.</p> <p>Cell surface receptors: cAMP/PKA Signal Transduction, The Phosphoinositide/Calcium Signal Transduction Pathway, Receptor Tyrosine Kinases (RTKs), The MAP Kinase Signaling Cascade.</p> <p>Intracellular Receptors: Nucleic Acid Cell Signalling, Calmodulin signaling pathway, Role of Ca ion as an intracellular messenger in the endocytosis.</p> | 15 |

| | | Subject : M.Sc. Botany, 2 nd semester |
|---|--|--|
| Course Code : B0408BT | Course Title : (i) Elementary Biotechnology | |
| Course Objectives: This course aims to help the students to attain an advanced understanding of the components of plant biotechnology and will provide an overview of genetic manipulation, its applications, GM crops, etc. | | |
| Learning Outcomes: Upon successfully completing this course, the students could be able to: | | |
| <ol style="list-style-type: none"> 1. Conceptualize plant transformation and selection of desirable genes for crop improvement. 2. Design binary vectors and learn the procedure for generating GM crops. 3. Describe GM crops and what products are in the market, their contributions towards food security, sustainable environment and medicine. | | |
| Evaluate critically the safety issues of GM crops and products in the society. | | |
| Credits : 4 | | Core Elective |
| Max Marks : 30+70 | | Min. Passing Marks : |
| Total no. of Lectures-Tutorials-Practical's (in hours per week): 6-6-6 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | 1. Definition, basic concepts, Principles and scope of Biotechnology 2. Recombinant DNA technology, basic concept in genetic engineering, tool and techniques of recombinant DNA technology. | 15 |
| II | 1. Enzymes in genetic engineering - exonucleases, endonucleases, restriction endonucleases, S I nucleases, DNA ligases, polymerase, Klenow, reverse transcriptase and alkaline phosphatase. 2. Gene cloning vectors - primary vectors-Plasmids, Phages, Cosmids, shuttle vectors, 2p DNA plasmid, Yeast plasmid Transposon, and expression vectors. Recombinant Protein expression, Fermentation and enzyme technology | 15 |
| III | Selection of genes: Case Studies, Genome and cDNA Library - Gene transfer methods, Genetic organization of T1 plasmid, T1 plasmid mediated transfer - Agrobacterium transformation, DNA mediated transfer, Calcium phosphate, PEG, DEAE, viro liposomes - Microinjection - Macromicroinjection, microprojectiles, and electroporation, - Selection of clones, marker and reporter genes in screening methods, Hybridizations - colony, Southern, Northern, Western Blotting. | 15 |
| IV | 1. DNA fingerprinting, gene therapy and genetic counseling. 2. Use of transposons in genetic analysis: Transposon tagging and its use in Identification and location of genes. 3. Elementary Knowledge of next generation sequencing. 4. Biosafety regulation: Physical and Biological containment. | 15 |

|---|---|--------------------------|
| Course Code : BIO60005T | Course Title : (b) Pharmacognosy | |
| Objectives: To study the fundamentals of Pharmacognosy like scope, classification of crude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties. | | |
| Course outcomes: Upon completion of the course, the student shall be able | | |
| 1. to know the techniques in the collection and production of crude drugs 2. to know the crude drugs, their uses and chemical nature 3. know the evaluation techniques for the herbal drugs 4. to carry out the microscopic and morphological evaluation of crude drug | Credit Points & Value Added | Min. Passing Marks : |
| Credits : 4 | | |
| Max Marks : 30+20 | | |
| Total no. of Lectures-Tutorials-Practical's (in hours per week): 4-0-0 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Definition, history, scope and development of Pharmacognosy. Phytochemical and Pharmacological literature review of <i>Azadirachta indica</i> , <i>Asparagus officinalis</i> , <i>Curcuma longa</i> etc. | 15 |
| II | Types of Plant drugs from vegetative parts and their Pharmacognostic study a) Root drugs: <i>Glycyrrhiza</i> and <i>Asparagus</i> , <i>Celosia</i> , <i>Millettia</i> , <i>Catharanthus</i> b) Rhizome drugs, <i>Zingiber</i> c) Leaf drugs, <i>Anthraxanthus</i> , <i>Citrus</i> d) Bark drugs, <i>Terminalia arjuna</i> , <i>Holarrhena</i> | 15 |
| III | Types of Plant drugs from Reproductive parts and their Pharmacognostic study a) Flower drugs: <i>Crocus</i> , <i>Cortichinus</i> , <i>Spiraea</i> b) Seed drugs: <i>Piper longum</i> , <i>Musa</i> c) Frukt drugs: <i>Carpobrotus edulis</i> , <i>Erythrina</i> , <i>Croton</i> | 15 |
| IV | Evaluation of the drugs: Organoleptic, Microscopic, Physical, Chemical and Biological methods of evaluation A brief account of various drug constituents: Carbohydrates, Cardiac glycosides, alkaloids, flavonoids, Tannins volatile oils, tannins quinones and steroids with particular reference to <i>Acacia gan</i> , <i>Phyllanthus</i> , <i>Celosia</i> , <i>Asparagus</i> , <i>Karela</i> | 15 |

| | | Subject : M.Sc. Botany - 2 nd semester |
|---|---|---|
| Course Code : S30006T | Course Title : (i) Applied Phycology | |
| Objectives: To study commercial production and utilization of algae. | | |
| Course Outcome: After completion of this course the students will be able to learn | | |
| | <ol style="list-style-type: none"> Mass cultivation of algae Controlling of biofouling of ships. Hydrogen production by algae. Production of biofertilizer | |
| Credit : 4 | | Core Elective |
| Max Marks : 10-20 | | Max Passing Marks : |
| Total hrs of Lectures-Tutorials-Practicals (in hours per week): 8-8-0 | | |
| Unit | Topic | No. of Lectures (40 hrs) |
| I | A brief account on genetic metabolic understanding in microalgae. Algae in environment: Biomonitoring, Carbon sequestration, waste water treatment. Value added product derived from microalgae. Hydrogen and biofuel production from algae. | 15 |
| II | Microalgae in liquid waste treatment and reclamation. Biological waste treatment system, Design consideration (Algal concentration, algal productivity) Operation of integrated algal-bacterial system, compost application, future application (Seawage grown algae, energy system, toxic removal). Algal toxins in aquatic environment. | 15 |
| III | Isolation, purification, development of unicellular cultures and culturing of microalgae Single cell protein from <i>Spirulina</i> , <i>Dunaliella</i> and <i>Chlorella</i> , designing of photobioreactor and algal cultivation in photobioreactor. Algal Transgenics and Biotechnology | 15 |
| IV | Paddy field cyanobacteria: Qualitative and quantitative assessment of their biodiversity using molecular tools; their use as biofertilizer, reclamation of salt lands. Influence of salt, heavy metals and acid rain on algae: Physiological and biochemical effects; biochemical and molecular mechanisms of tolerance. | 15 |

| | | Subject : M.Sc. Botany 2 nd semester |
|--|---|---|
| Course Code : | Course Title : (a) Stress Physiology of Plants | |
| Objectives: Objective: This course aims to educate student on concepts of various types of stresses in crop production and strategies to overcome them. | | |
| Learning Outcomes: | | |
| 1. The students will understand various aspects of stress physiology such as physiological and molecular basis of abiotic and biotic stress tolerance in plants. | | |
| 2. The knowledge in stress physiology will be useful for developing climate resilient genotypes for sustainable crop production. | | |
| 3. Student also able to explain what basic processes and/or traits are affected by each one of the stresses. | | |
| 4. Explain how the plant tissue responds at the biochemical and molecular level to each one of the stresses. | | |
| Credit : 4 | Core Elective | |
| Max Marks : 30+70 | Min. Passing Marks : | |
| Total no of Lectures-Tutorials-Practical's (in hours per week): 6-6 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Biological stress vs. Physical Stress, Types of stresses and general methods of measurement of stress response (Stress), Stress physiology in crop improvement, Response to UV stress: injury and resistance mechanism | 15 |
| II | Response to low temperature stress: Chilling, freezing, frost injury and mechanism of resistance, Adaptations, Response to high temperature stress: Injury and mechanism of resistance, Heat shock proteins, Adaptations | 15 |
| III | Response to nutrient deficiency stress, Heavy metal stress, Injury and mechanism of resistance, adaptations, Salinity stress, Ionic and salt stress injury, mechanism of resistance | 15 |
| IV | Response to water deficit: Desiccation, Dehydration injury; Mechanism of resistance, Adaptations, Response to water excess: Osmo-protective agents for Biotic Stresses, Mechanism of Resistance against Fungal, Bacterial and viral pathogens | 15 |

Suggested readings:

| Unit | Topic | | | | | | | | | | | | | | | | | | | | | | |
| I | 1. Exercise based on Mendelian experiments (monohybrid, dihybrid and test cross). 2. Exercise based on gene mapping. 3. Exercise based on gene regulation 4. Laboratory exercises in probability and chi-square 5. Chromosome mapping using three-point test cross 6. Study of co-dominance. 7. Study of lethal allele 8. Study on different gene interaction (Epistasis) 9. Numerical exercise on multiple factor hypothesis | | | | | | | | | | | | | | | | | | | | | | |
| II | 1. Mitotic studies in suitable material: Squashing of the root tip and selection of metaphase plate. 2. Mitotic studies in suitable material: <i>Carex Lepto</i> drawing, Karyotype analysis, Meiosis and derivation of karyotypic formula. 3. To study chromosomal aberrations in <i>Rheo</i> spp. 4. Meiosis in <i>Allium cepa</i> . 5. To measure the cell's size. 6. To study cell's inclusion. 7. To study different cell's types and their <i>carpos</i> loculae drawing. 8. Histological analysis of the following chemical compounds: a) Alkaloids b) Saponins c) Quinones d) Resins e) Glycosides f) Pigments g) Volatile oils. 9. Organoleptic evaluation of the following: a) Glyceritins (Root) b) Ginger (Rhizome) c) <i>Eucalyptus</i> (leaf) d) <i>Tinospora cordifolia</i> (Bark) f) <i>Stevia rebaudiana</i> (seed). 10. Powder analysis: a) Curcuma b) Cloves c) Senna d) Fennel e) Cinnamon: Market drugs: a) Turmeric b) Chillis c) Coriander d) Wheat and Jowar. | | | | | | | | | | | | | | | | | | | | | | |
| III | 1. Comparative anatomy of mesocotylous and dicotyledon root, stem and leaf. 2. Anatomical basis of identification C3& C4 sub types in grasses. 3. Phytoliths of grasses and their potential use in identification. 4. Anatomy of lamellae and perisperm in plants. | | | | | | | | | | | | | | | | | | | | | | |

5. Anatomy of monocotyledonous and dicotyledonous seeds.
6. Study of different types of stamens and trichomes.
7. Maceration of wood to study xylem components.
8. Study of microporogenesis and microsporogenesis.
9. Study of megasporogenesis and embryo sac development.
10. Study of types of endosperm and its modifications.
11. Study of development of embryo in direct and nucellate.
12. Study of different orientation pattern in pollen grains by acetolysis.
13. Analysis of honey samples to identify uni-floral or multi-floral honey.

Semester 2

Industrial Training/Research Project/Survey/Value Addon

Course Code: B041809R (Research Project)

Duration: 60 Hrs.

Course Objectives: The objective of this course is to provide students with hands-on training in specialized areas of plant sciences.

Course Outcomes: After completion of this course the students will acquire the following:

1. Training in experimental design and execution
2. Knowledge on techniques and tools of research
3. Designing of research proposal.
4. Writing of research work and review paper

Contents

The topic of the research project will be chosen from among the core compulsory courses/core elected courses of that year.

| | | Subject : M.Sc. Botany 2 nd SEMESTER | | |
|---|---|---|--|--|
| Course Code-QB040801T | Course Title : Fascinating Plants | | | |
| Course Objectives: | | | | |
| The course aims to have understanding of Plant & Religion, sacred & Economic important Plants. | | | | |
| Course Learning Outcomes: | | | | |
| The students will be learning? | | | | |
| <ol style="list-style-type: none"> What are the sacred plants? What are morphological modifications, adaptation in plants? What are economic important plants? What are conservation strategies of threatened taxa? | | | | |
| Credit : 4 | Affair-Open Elective for other subjects | | | |
| Max Marks : 20+70 | Mr. Passing Marks : | | | |
| Total no. of Lectures-Tutorials-Practical's (in hours per week): 5-0-0 | | | | |
| Unit | Topic | No. of Lectures (45 hrs) | | |
| I | Plants & Religion: Tree worship in Vedic Period, Brahman, Buddhism & Islam; Plant & Astrology; Sacred Gravest; Venerated plants of your Locality. Phoenix Worship, Myths, Plants in Epics like Mahabharata, Ramayana. | 15 | | |
| II | Plants with Unique Morphology: Welwitschia, Cacti, Orchids, Rafflesia, Rafflesia, Sarcotrichia, Sarcotrichia & its allied Taxa, <i>Vitis rotundifolia</i> , <i>Amarapophytum</i> , Benthic (<i>Ademone</i>), <i>Selaginella lepidophylla</i> , Diving Grass (<i>Dioscorea gummata</i>), <i>Mimosa pudica</i> ; Insectivorous plants (<i>Drosera</i> , <i>Nepenthes</i> , <i>Drosera</i> , <i>Utricularia</i> etc); Parasitic Plants. | 15 | | |
| III | Economic important Plants: Ornamental, Medicinal, poisons & Timber yielding plants of your Locality. | 15 | | |
| IV | Special pollination mechanisms (<i>Ficus</i> , <i>Catostoma</i> , <i>Ophiya</i> , <i>Salsola</i>), Signature Plants & Plants that thrill (Stimulants, Depressants etc), Conservation of Rare, Endangered and threatened plants, Exotic & Invasive Plants. | 15 | | |

Suggested Readings:

1. Raven, P.H., Evert, R.F. and Eichhorn, S.E. (2005). *Biology of Plants* (7th ed.). New York: W. H. Freeman and Company.
2. Sakai, A. and Larcher, W. (1987). *Frost Survival of Plants*. Springer-Verlag, New York NY. 321 pp.

4. Trewavas, A. (2003). Aspects of plant intelligence. *Annals of Botany*, 92 (1): 1-20.
5. Passer, G.T. (2001). Discovering the plant world. *Taxon*, 50 (2, 4): 345-350.

Semester 3

| <p style="text-align: center;">Subject: M.Sc. Botany 3rd semester</p> <p>Course Code : Course Title : Medicinal Botany and Ayurvedic System of Medicine</p> <p>090901T</p> | | |
|---|---|--------------------------|
| <p>Objectives: To acquire knowledge on the methods of preparation and use of formulation of various systems of medicines.</p> | | |
| <p>Course Outcomes: The students will be able to learn principles and concepts of alternative systems of medicine like ayurvedic medicine. Besides the students will also be able to learn knowledge on the methods of preparation and use of formulation of various systems of medicines.</p> | | |
| <p>Credits : 4</p> | | |
| Max Marks : 30+70 | Core Compulsory & value added Min. Passing Marks : | |
| Total no. of Lectures-Tutorials-Practical's (in hours per week): 4-0-0 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Introduction to various systems of Indigenous Medicine, Introduction to basic concepts of folk medicine and Ayurveda. Principles and Concepts of Ayurveda, History and Development of Ayurvedic medicine. | 15 |
| II | Study of some Ayurvedic drugs & Their Plant sources Shuddhi, Guggal, Ashoka, Sonth, Sarpgandha, Kalmegh, Gokhru, Punnarava, Ashwagandha, Jatamansi, Indigo, Vriksh, Shikakai, Neem, Curry Patta, Giliee, Kachna, Ajwain, Elaichi, Bihara, Amla, Amukta, Bayyan, Tulsi, Nadulakay and more. | 15 |
| III | Role of plants in medicine. Morphology, active principles and medicinal value of the following <i>Astragrapis paniculata</i> , <i>Amarica oleifera</i> , <i>Clitoria ternatea</i> <i>Pithecellobium dulce</i> and <i>Gymnosma glabra</i> . Plant secondary metabolites of medicinal importance: alkaloids, glycosides, mucilage, starch. Some common herbal practices used to cure - fever, worm, diarrhea, cough, cold, Arthritis, rheumatism, stone in urinary tract, eczema or fungal infections. | 15 |
| IV | Introduction to Ayurvedic formulations with method of preparation & Upan-Churna, Van, Avitt, Asava, Arista, Tulsi and Bhoomi. Ayurvedic Products: Triphala, Chyawanprash, Ghriti, etc Knowledge of ancient equipment like khanda yastu, Arkha yastu, Patani yastu | 15 |

Suggested readings

- Awadesh, N., Ghosh, A. and Sharma, R., Indigenous Health Care and Ethnomedicine, Sarp and Soni.
- Glossary of Indian Ethno-Pharmacology by P. Padmapaliam, Ulf Nyman, V. George Tropical Botanic Garden & Research Institute.
- Textbook of Pharmacognosy by C. K. Kokate, Pusalkar, Ghodkade, Nirali Prakashan.
- Ayurvedic formulary of India, Govt. of India

5. Pharmacopoeial standards for Ayurvedic formulation CCRAS, Delhi
6. Ayurvedic pharmacopoeia
7. Indian herbal pharmacopoeia vol 1 & 2 ISHEDMA
8. Vaidya Yogn Ramnath (Formulary of Ayurvedic Medicines)
9. Srivastava, V. V. (1994). Ayurvedic drugs and their plant sources, Oxford & IBH Publishing Company.
10. Rajput, V. (2008). Traditionalism by Botanists. Vol. 1, Basera Publishers, New Delhi.
11. Parvez, J. A. (2001). Healing plants of peninsular India, CAII Publications.
12. Principles of integrated medicine by Motter PR

| Subject : M.Sc. Botany 3 rd semester Course Code : B040902T Course Title : Plant Biochemistry and Molecular Biology | | |
|---|---|--------------------------|
| Objective: This course aims to educate student on concepts of protein, enzymes, basic plant signaling mechanisms, sensory photobiology. The course further deals with plant secondary metabolites and plant-plant interaction. | | |
| Course Outcomes: | | |
| <ol style="list-style-type: none"> Impart an insight into the various biochemical and molecular mechanism of plant biology. Take students to higher levels of biochemical and molecular learning about plant system. Understand the biochemical and molecular role of various biomolecules. Acquire knowledge about signal transduction and sensory photobiology. After completion of this syllabus students will able to crack competitive examinations such as Agricultural Research Services, CSIR, TIFR/NCSB, IISc (Bangalore), GATE, and IIT-JEE. | | |
| Credits : 4 | Core Compulsory | |
| Max Marks : 30+70 | Min. Passing Marks : | |
| Total no. of Lectures-Tutorial-Practical's (in hours per week) : 4-0-0 | | |
| Unit | Topic | No. of Lectures (80 hrs) |
| I | Thermodynamics, Protein structure and Enzymes: Application of principles of thermodynamics in biology; enzyme kinetics and inhibition of enzymatic activity. Hierarchical structure of proteins; purification of proteins via chromatography, precipitation and antibody. | 15 |
| II | Signal Transduction: Signalling mechanism of plant hormones viz. auxin, cytokinin and ethylene. | 15 |
| III | Sensory Photobiology: Molecular Structure, function and mechanism of action of photoreceptors, cryptochromes and phototropins; Light induced stomatal movement; Molecular events during stememorphogenesis and photomorphogenesis. | 15 |
| IV | Molecular structure of Secondary metabolites, Natural products (secondary metabolites), their range and eco-physiological function. Overview of terpenoids, alkaloids, and phenolics. | 15 |

Suggested Readings:

- Bashford, B., Quatrano, G. and Jones, R. (2001). Biochemistry and Molecular Biology of Plants. American Society of Plant Physiologists, USA.
- Davies P. J. (2004). Plant Hormones: Biosynthesis, Signal Transduction, Action. 3rd Edition, Kluwer Academic Publisher, Dordrecht, The Netherlands.

5. Taitz, L. and Zeiger, E. (2010). *Plant Physiology*, 3rd Edition. Sinauer Associates, USA.
6. Heldt, H. W. and Pichaluk, B. (2010). *Plant Biochemistry*, 4th Edition. Academic Press, NY.

| Subject : M.Sc Botany 3rd semester Course Code : 8044983T Course Title : Environmental Chemistry | | |
|---|---|--------------------------|
| Objective: To impart the students about the environment that humans can put across bills and policies that can help protect the world from disasters such as Global Warming, Climate Change and to keep its country eco-friendly. | | |
| Course Outcomes: Upon successful completion of the course the student will be able to: | | |
| 1. Classification of elements, composition of air, the characteristics of hydrocarbons, biogeochemical cycles, particulates, and their effects 2. Demonstrative knowledge of chemical and biochemical principles of fundamental environmental processes in air, water, and soil. 3. Recognize different types of toxic substances & responses and analyse toxicological information. 4. Describe sources and effects of environmental pollutants by air and discuss some mitigation strategies. 5. Get job as Water Treatment Specialist in Water Treatment and Waste Disposal, Environmental Assessment Analyst, Environmental Auditor, Chemist, Environmental Consultant, Government Scientist (Provincial and Federal), Research Associate in University, Environmental Health & Safety Coordinator in Chemical Product Distributor, Quality Assurance in Manufacturing (Food, Paper, Chemical, Plastics), Analytical Specialist in Engineering Consulting and crack UGC NET | | |
| Credits : 4 | Core Compulsory | |
| Max Marks : 80+70 | Min. Passing Marks : | |
| Total no. of Lectures-Tutorials-Practicals (in hours per week): 4-0-8 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Environmental Chemistry Fundamentals of Environmental Chemistry: Classification of elements, Stoichiometry, Gibbs' energy, chemical potential, chemical kinetics, chemical equilibria, solubility of gases in water, the carbonate system, unsaturated and saturated hydrocarbons, radioisotopes. | 15 |
| II | Composition of air. Particles, ions and radicals in the atmosphere. Chemical speciation. Chemical processes in the formation of inorganic and organic particulate matter, thermochemical and photochemical reactions in the atmosphere. Oxygen and Ozone chemistry. Photochemical smog. | 15 |
| III | Hydrological cycle. Water as a universal solvent. Concept of DO, BOD and | 15 |

| | | |
|----|--|----|
| | COD, Sedimentation, composition, flocculation, filtration, pH and Redox potential (ER). | |
| IV | Inorganic and organic components of soil. Biogeochemical cycles – nitrogen, carbon, phosphorus and sulphur. Toxic chemicals: Pesticides and their classification and effects. Biochemical aspects of heavy metals (Hg, Cd, Pb, Cr) and metabolites (As, Sb, CO, O ₃ , PAN, VOC and POP). Contaminants in the air. | 15 |

|---|---|--------------------------|
| Course Code : IBDI0104T | Course Title : (ii) Genetic Engineering | |
| Course Objectives: The aim of this course is to provide a profound knowledge on the methods used in Genetic Engineering allows students to apply these in basic and applied fields of biological research in an innovative way. | | |
| Course Outcomes: Upon successfully completing this course, the students would be able to: | | |
| <ol style="list-style-type: none"> 1. Outline the basic steps in genetic engineering. Describe the mechanism of action and use of restriction enzymes. 2. Describe the techniques used to probe DNA for specific gene of interest and also the technique used to study gene expression. 3. Conceptualize the basics and applications of genomics, proteomics and bioinformatics. 4. Discuss the methods of protein sequencing, protein and metabolic engineering and their future prospects. 5. Explain the usefulness of RNA interference and its potential for crop improvement. 6. Outline the fundamentals of genome editing. | | |
| Credits : 4 | Core Elective | |
| Max Marks : 100/76 | Min. Passing Marks : | |
| Total no. of Lectures-Tutorials-Practical's (in hours per week): 4-0-0 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Genetic Engineering (General). Restriction mapping, Restriction of Chimeric DNA- triggered cleavage, addition of oligopolymer tailing & linkers, blot and ligation. Gene sequencing (principle & different techniques), cDNA & genomic libraries. | 15 |
| II | DNA analysis: Labelling of DNA & RNA probes, southern & northern in-situ hybridization, DNA fingerprinting, chromosome walking. Techniques for gene expression: Northern & western blotting, gel retardation technique, DNA footprinting, primer extension, S1 mapping, reporter assays. | 15 |
| III | Proteomics as a tool for plant genetics, breeding & diversity studies. Protein extraction/ purification techniques via electrophoresis & column chromatography. Protein sequencing methods, detection of post translational modifications of proteins, methods of analysis of gene expression at RNA and protein level. Large scale expression such as Microarray based techniques. Protein Engineering and metabolic engineering- definition and explanation, Steps, Achievements and future | 15 |

| | | |
|----|---|----|
| | prospects | |
| IV | RNA interference- introduction, RNAi as tool for gene expression, RNAi as a potential therapy, use of transposons in genetic analysis; Transposon & T-DNA tagging & its use in identification & isolation of genes, introduction to genome editing with reference to CRISPR/Cas system. | 15 |

Suggested Readings:

1. Howe, C. (2007). Gene Cloning and Manipulation (2nd Edition).
2. Clark, D., Pandarkar, N. and McGeehee, M. (2018). Molecular biology (3rd Edition).
3. Prineas, S. B. and Twyman, R. (2016). Principles of Gene Manipulation and Genomics (7th Edition).
4. Brown, T. A. (2020). Gene Cloning and DNA Analysis: An Introduction (8th Edition).
5. Thiesse, (2020). Introduction to Biotechnology (4th Edition).

| <p style="text-align: center;">Subject : M.Sc. Botany 2nd Semester</p> | | |
|--|---|--------------------------|
| Course Code : BB409857 | Course Title : (b) Evolutionary Biology | |
| Course Objectives: The objective of the course is to provide an understanding of the trends in changes occurring in living organisms over period of time through various process and pattern. | | |
| Course Outcomes: Students will be able to grasp understanding of: | | |
| Credits : 4 | Care Effective | |
| Avg Marks : 50+70 | Min Passing Marks : | |
| Total no. of Lectures-Tutorials-Practical's (in hours per week): 4-0-0 | | |
| Unit | Topic | No. of Lectures (40 hrs) |
| I | Introduction - Patterns and process components of scientific theories: Biological variation and evolutionary change (evidence for evolution). Darwin and Wallace – natural selection, adaptation. Macroevolution, microevolution. Evolutionary history: reading trees, monophyly, Tree of life. Evolutionary trends: macroevolution, origin and evolution of traits across life and great plants. | 29 |
| II | The fossil record. Geological fundamentals. Phylogeny and the fossil record. Evolutionary trends. Rates of evolution. The geography of life. Major patterns of distribution. Historical biogeography, phytogeography. | 10 |
| III | The Modern Synthesis: Population Genetics. Forces of evolution: Genetic drift – Sampling error; Mutation. Migration/Gene Flow. Adaptation – Fitness, coefficient of selection. One locus models, multi-locus models, modes of selection. Non-adaptive traits. Molecular evolution. Neutral theory. Molecular clock. Testing for selection. Modes of selection. Pairwise distances and molecular divergence. Molecular models. | 15 |
| IV | Species. Reproductive isolation. Species concepts and processes of speciation. Drivers of speciation. Geographic pattern. Evolutionary mechanisms. Postzygotic and prezygotic isolation in allopatry and sympatry. Reinforcement, character displacement. Hybrid speciation. | 15 |

Suggested Reading:

9. Research and review articles on relevant topics.

| Subject : M.Sc. Botany 2nd semester Course Code : BB10906T Course Title : (c) Plant Nomenclature | | |
|---|---|--------------------------|
| Course Objectives: | | |
| This course aims to add to understanding of the students about International code of Nomenclature for algae, fungi & Plants | | |
| Course Outcomes: | | |
| The students will learn: | | |
| 1. What are different methods of naming plants? What are different principles & Rules of nomenclature? Why some changes? | | |
| Credits : 4 | Cove Elective | |
| Min Marks : 30+70 | Min Passing Marks : | |
| Total no of Lectures-Tutorials-Practicals (in hours per week): 4-0-40 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Polynomial System of Nomenclature, Binomial System of Nomenclature, Trinomial System of Nomenclature. History and Development of the Code of Botanical Nomenclature, Important dates in the Code, Structure and organization of the Code, How to publish a new name. | 15 |
| II | Principles of ICN and their explanation Ranks & Taxa: Ranks and Nomenclature of Taxa, Type Method, How to designate a type? Principle of Priority and Its Limitations, How to find the correct name for a taxon? Effective and Valid Publication | 15 |
| III | Citation, How to cite names of authors? Conservation, Protection, Revision of Names and Epithets of Taxa, Choice of Name, Revision of Names and Epithets, suppressed names, and binomial decisions, <i>Nomina Conservanda</i> | 13 |
| IV | Orthography of Names, How to spell names? Nomenclature of Hybrids and Cultivated Plants Publication of a New Species How to change the Code? | 15 |

Suggested Readings

1. Turland et al. (2018). International code of nomenclature for algae, fungi and plants.
2. Turland, N. (2019). *The Code Decoded, A user's guide to the international code of nomenclature for algae fungi & plants*. Pensoft Publisher.

| Subject : M.Sc. Botany 3 rd Semester | | |
|--|--|---------------------------|
| Course Code: | Course Title : Practical Lab 3 | |
| Objective: To perform 20 experiments from the given list (at least 6 experiments from each units) and to perform exercises related to Medicinal botany, ethnobotany, floral and molecular biology. | | |
| Course outcome: Identification of various plant parts used in medicines by ethnic groups, and preparation of Ayurvedic product. The students will be able to learn technique of molecular and floral biology. | | |
| Credits : 4 | | |
| Max Marks : 40-70 | | |
| Min. Passing Marks : 60-64 | | |
| Total no. of Lectures / Materials / Practical's (4 hours per week) : 6-8-04 | | |
| Unit | Topic | No. of Lectures (120 hrs) |
| I | <ol style="list-style-type: none"> Ethnobotanical specimen is presented in theory syllabus. Detailed morphological and anatomical study of medicinally important part(s) of locally available plants used in traditional medicine. Field visits to identify and collect <i>ethno</i> medicinal plants used by local tribes/folklore. Preparation of Churna, and Vati. Preparation of Avlekh, Asava, Arishta, Taila and Bhasma. Preparation of Triphala, Chyawanprash, Ghriti. Collection and Conservation of Medicinal plants in garden of your institute. | 40 |
| II | <ol style="list-style-type: none"> Isolation and purification of genomic DNA from plant materials. Isolation and purification of RNA from plants. Culture of plasmid and maintenance of culture. Isolation of plasmid DNA. Quantitative estimation of genomic DNA and RNA using spectrophotometer. Agarose gel electrophoresis of genomic DNA and RNA and detection using gel documentation system. Digestion of DNA by restriction enzymes and size fractionation of fragments. Ligation of digested fragments. Primer designing. cDNA formation using reverse transcriptase. | 40 |
| III | <ol style="list-style-type: none"> Floral biology of <i>Cleyera jambiana</i>. Floral biology of <i>Zizaniopsis</i>. Effect of chemical mutagen (DES/HZ/EMS) on germination, growth and yield characteristics in <i>Brunsvicia foetida / Neptunia balsamifera</i>. | 40 |

| | | |
|--|---|--|
| | 4. Crossing techniques in <i>Oryza sativa</i> . 5. Crossing techniques in <i>Zea mays</i> 6. In vitro embryo culture of pea (<i>Pisum sativum</i>). 7. Nomenclature based exercises. | |
|--|---|--|

Semester 3

Industrial Training/Research Project/Survey (Value Added)

Course Code: B040108R (Research Project)

Duration: 60 hrs.

Course Objectives: The objective of this course is to provide students with hands-on training in specialized areas of plant sciences

Course Outcomes: After completion of this course the students will acquire the following:

1. Training in experimental design and execution
2. Knowledge on techniques and tools of research
3. Designing of research proposal
4. Writing of research work and review paper

Contents

The topic of the research project will be chosen from among the *core compulsory courses/com elected courses of that year*.

Semester 4

| | | Subject : M.Sc. Botany 4 th semester |
|--|--|---|
| Course Code : BSC3001T | Course Title : Environmental Issues and Policies | |
| Objectives: To study environmental issues at global level | | |
| Course outcome: After completion of this course the students will be able to learn- | | |
| 1. The causes of global climate change. 2. Understand the causes of global water & energy crisis 3. National policies on environment 4. Causes of Biodiversity loss | | |
| Credits : 4 | Core Compulsory | |
| Max. Marks : 50-70 | Min. Passing Marks : | |
| Total no of Lectures-Tutorials-Practicals (in hours per week): 4-0-0 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Environmental Pollution: Causes and effects of air, water, soil, noise, radioactive pollution; Basic pollution abatement practices and technologies Global Change: Global land cover and land use change; Multiple impacts of land use change; Causes, effects and mitigation strategies for global climate change and stratospheric ozone loss | 15 |
| II | Bio-invasions: Extent and mechanisms of biological invasions; Ecological and economic impacts; Management strategies. Loss of Biodiversity: Threats and pattern of biodiversity loss; Natural and anthropogenic causes; IUCN threat categories, Red data books, Conservation and restoration of biodiversity | 15 |
| III | Global Water Crisis: Distribution, withdrawal and consumption patterns; Causes and effects of water crisis; Water conservation approaches. Global Energy Crisis: Sources of energy supply; Current potential and future prospects of energy sources; energy crisis; Energy conservation strategies | 13 |
| IV | Challenges of Urbanization: Trends of urbanization; Environmental impact of urbanization; Concept of green cities. National Policies on Environment: National Forest Policy; National Water Policy; National Energy Policy; National Action Plan on Climate Change; National Biodiversity Action Plan. | 15 |

Suggested Readings:

1. McConnell, R. (2008). *Environmental issues: An introduction to sustainability*. Pearson.
2. Wall, M.K., Fahey Everard, M., Fossenby, S. (2009). *The environment: science, issues and solutions*. CRC Press.

4. Marshall, J. and Plumb, R. A. (2008). *Atmosphere, ocean and climate dynamics: An introductory text*. Elsevier.
5. Phillips, B., Thomas, D., Fothergill, A. and Blaauw-Pike, L. (2009). *Social vulnerability to disasters*. CRC Press.
6. Hall, M. (2010). *Understanding environmental pollution*. Cambridge University Press.

| Subject : M.Sc. Botany 4 th semester | | |
|--|--|-------------------------|
| Course Code : BSC1002T | Course Title : Ethnobotany & Intellectual Property Rights | |
| Course Objectives: This course will provide the necessary introduction about ethnobotany & IPR. | | |
| Course Outcomes: Students will be able to grasp understanding of: | | |
| 1. Ethnobotanical studies in India and what is ethnobotany 2. What are IP rights, their types and how they are connected with biological resources, ethnobotanical knowledge and can it be used to protect/conservate resources, rights of people and prevent biopiracy. 3. Utility of ethnobotanically important plants | | |
| Credits : 4 | Core Compulsory | |
| Max Marks : 70/70 | Min. Passing Marks : | |
| Total no of Lectures-Tutorials-Practical's (in hours per week) : 4.0-8 | | |
| Unit | Topic | No. of Lectures (8 hrs) |
| I | Introduction; a brief history of ethnobotanical studies in the world and in India; scope of ethnobotany. Subdisciplines of ethnobotany | 10 |
| II | Origin, utilization, cultivation and uses of plants: Reed, jute and fodder crops; fibre crops; vegetable oil-yielding crops; timber-yielding plants; non-wood forest products (NWFPs) such as bamboo, rattan, raw materials for paper making, gums, tannins, dyes, rosins and fruits | 20 |
| III | Intellectual Property Rights: Concept, types, Need and Relevance of IPRs, National IPR Policy International IP regimes: WTO-TRIPS and other key international legal instruments Copyright: concept, Subject matter of Copyright, Term, ownership, moral rights, infringement, remedies, defenses/lessee uses. Patent: History, Patentability Requirements, Patent Specification, Patent Procedure, Infringement, Defense, Remedies. | 10 |
| IV | Traditional knowledge and utility of some medicinal plants in UP & Neighbouring states - <i>Solanum trilobatum</i> , <i>Cardiospermum halicacabum</i> , <i>Pterospermum acerifolium</i> , <i>Astrophytum sonorensis</i> , <i>Ziziphus indica</i> , <i>Grewia asiatica</i> , <i>Zelkova serrata</i> , <i>Artemesochia indica</i> , <i>Phyllanthus amarus</i> and <i>Bixa orellana</i> . | 20 |

24. Research and review articles on relevant topics.

Subject : M.Sc. Botany / Chemistry

| | |
|-----------------------|--|
| Course Code : B11B03T | Course Title : (i) Biophysical Chemistry |
|-----------------------|--|

Objective: Developing of general understanding how physical laws govern biological processes and acquire basic knowledge about how physical methods can be applied to understand biological processes.

Course Outcome:

On completion of the course, the student should be able to:

- Account for the different interactions that are important for the formation of structures in biological system and for how thermodynamic parameters can be measured.
- Account for basic concepts of laboratory reagents preparation and their uses.
- Account for function of biological buffer system and titration of acid and base.
- Explain and apply methods for the determination of functional molecular mass of biological macromolecules in solution as well as determination of equilibrium - and rate constants for macromolecule-ligand interaction.
- Students will be able to qualify CSIR NET, GATE and other entrance examinations.

Credits : 4

Core electiv.

Max Marks : 30+70

Min. Passing Marks :

Total no of Lectures-Tutorials-Practicals (in hours per week) (4-3-1)

| Unit | Topic | No. of Lectures (40 hrs) |
|------|---|--------------------------|
| I | Solutions:Normality, molality and molarity of the solution; ppm and percent solutions, colligative properties of electrolytic solutions; the Donnan effect. | 10 |
| II | Acid and Bases: Definition of acid and base, acid-base properties of water, concept of pH and pK _a , acid (mono acids) and base titration, diprotic and polyprotic acids, preparing a buffer solution with specific pH, dissociation of amino acid, isoelectric point, titration of protein. | 10 |
| III | Bioenergetics: Concept of free energy, standard free energy, determination of AG for a reaction. Relationship between equilibrium constant and standard free energy change, biological standard state & standard free energy change in coupled reactions, Gibbs energy of biological membrane transport, Biological oxidation-reduction reactions, redox potentials, relation between standard reduction potentials & free energy change. High energy phosphate compounds: introduction, phosphate group | 20 |

| | | |
|----|--|----|
| | transfer, free energy of hydrolysis of ATP and sugar phosphates along with reasons for high AG. Free energy of enzymatic reaction: activation energy, binding energy, relation between activation energy and free energy. | |
| IV | Kinetics of biochemical reaction: Biochemical equilibrium and protein-ligand binding mechanism. Concept of ES complex, active site, specificity, derivation of Michaelis-Menten equation for uni-substrate reactions, different plots for the determination of K_m & V_{max} . Importance of K_m/K_m' . Kinetics of zero & first order reactions. Classification of multi substrate reactions with examples of each class. Derivation of the rate of expression for Ping Pong, random & ordered Bi-Bi mechanisms, deactivation and reactivation kinetics of DNA and protein, Cox curve. | 20 |

| Subject : M.Sc. Botany 4 th semester | | |
|---|---|--------------------------|
| Course Code : B041006T | Course Title : (ii) Nanobiotechnology | |
| Objectives: This course aims at developing sound knowledge of scope of nanobiotechnology in biological systems, their properties, techniques used in nanobiotechnology, and its applications in medical and agricultural fields. | | |
| Learning Outcomes: By the end of the course, the students should be able to: | | |
| <ol style="list-style-type: none"> 1. Studying the basics and scope of nanobiotechnology. 2. Acquiring theoretical knowledge of application of nanoparticles in medicine, agriculture and environment. 3. Describes the various techniques used for characterization of nanoparticles. 4. Learn about the potential hazards of nanoparticles. | | |
| Credits : 4 | Core elective | |
| Max Marks : 10+70 | Min. Passing Marks : | |
| Total no. of Lectures-Tutorials-Practicals (in hours per week): 4-3-0 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Introduction to Nano biotechnology and its scope, history of nanobiotechnology, nanobiomaterials, challenges for nanobiotechnology, synthesis of nanoparticles. Microbes for the evaluation of nanomaterial toxicity. | 15 |
| II | Properties and characterization of nanoparticles- 1) Optical (UV-VIS Fluorescence), 2) X-ray diffraction 3) Size and imaging- electron microscopy, light scattering. 4) Surface and composition- EDAX, AFM/STM. 5) Vibrational FT-IR and Raman spectroscopy. | 15 |
| III | Interaction of nanomaterial and biopolymer (protein, nucleic acid, carbohydrates and lipids). Nanomedicine- cell interaction. | 15 |
| IV | Nanobiotechnology and its applications in agriculture. Nanobiotechnology and its applications in medicine and pharmaceuticals. Microbes in nanobiotechnology; production of nanoparticles using bacteria. Nanotoxicology- nanoparticles and their potential toxicity in organisms/ toxicity and environmental risks of nanomaterials. | 15 |

Suggested Readings:

3. Dornay, R. (2016). Application of Nanobiotechnology in Drug Delivery.
4. Virgili, T. and Balakrishna, K. M. (2021). Nanotechnology: An Introduction to Synthesis, Properties and Applications of Nanomaterials.

| <p style="text-align: center;">Subject : M.Sc. Botany 4th semester</p> <p>Course Code : BD1101FT</p> <p>Course Title : (a) Glycobiology</p> | | |
|--|---|---------------------------------|
| Objective: | | |
| <ol style="list-style-type: none"> 1. To study chemistry of carbohydrates, the enzymology of glycan formation and degradation. 2. To study the recognition of glycans by specific proteins (lectins and glycosaminoglycan-binding proteins), glycan roles in complex biological systems, and their analysis or manipulations by a variety of techniques. | | |
| COURSE OUTCOME: | | |
| <ol style="list-style-type: none"> 1. Be able to understand the role of glycans in biophysics and biotechnology. 2. Being able to understand role of glycans in health and disease and medicinal field. 3. Having Prospects to work in pathology and dermatological laboratories. | | |
| Credit :- 4 | Core elective | |
| Max Marks :- 30/70 | Min. Passing Marks :- | |
| Total no. of Lectures-Tutorials-Practicals (in hours per week) :- 8-0 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | General Principles: Historical Background and Overview; Saccharides Structure and Nomenclature; Exploring the Biological Roles of Glycans. | 10 |
| II | Biosynthesis, Metabolism, and Function: Monosaccharide Metabolism, N-Glycans, O-Glycans, Glycoconjgolipid, Glycolipid Anchors, Proteoglycans and Glycosaminoglycans, Sialic Acid, overview of Glycosyltransferases, Degradation and Turnover of Glycans, Bacterial Polysaccharides. | 20 |
| III | Protein-Glycan interactions: Discovery and Classification of Animal, Plant and Fungal Lectins, Selectins, Galectins, Microbial Carbohydrate-binding Proteins, Plant Lectins, their Classification , Structure, Uses and function; Fungal lectins, their structural diversity, biological functions, molecular characterization. | 20 |
| IV | Methods and Applications: Principles of Structural Analysis and Sequencing of Glycans, Chemical and Enzymatic Synthesis of Glycans, Natural and Synthetic Inhibitors of Glycosylation, Glycobiology in Biotechnology and Medicine | 10 |

Subject: M.Sc. Botany 4th semester

| | |
|-------------------------|---|
| Course Code: BH1108T | Course Title : (b) Plant Tissue Culture |
|-------------------------|---|

Objectives: The course aims at applied aspects of plant tissue culture. After completing this course the students should be able to:

1. Define the basic concepts of plant tissue culture.
2. Study of various culture techniques used in plant tissue culture.
3. Recognition of the importance and applications of plant tissue culture.
4. Job oriented skill development of students to start or work in commercial plant tissue culture laboratory.

Course Outcomes: After completing this syllabus, students will be able to:

1. Use various in vitro culture techniques for plant / crop improvement.
2. Become an entrepreneur by developing their own Plant Tissue Culture lab.
3. Can enhance secondary metabolite content in different medicinal plants through in vitro culture techniques.
4. Have relevant knowledge and skill to establish and maintain green house for Hortic Agriculture/Farming.

1.

| Credits : 4 | Core/elective | |
|--|---|--------------------------|
| Max Marks : 20+20 | Min. Passing Marks : | |
| Total no. of Lectures-Tutorials-Practicals (in hours per week) 4-0-0 | | |
| | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Introduction to Plant Tissue culture Introduction to Plant Tissue culture, Terms and definitions, Historical background, Laboratory organization, Tools and techniques, methods of sterilization, basic techniques of plant tissue culture, Culture media, culture media preparation and sterilization, callus and suspension cultures. | 15 |
| II | Organ Culture and Protoplast culture Protoplast-isolation regeneration and Viability test, Somatic hybridization and methods of protoplast fusion- chemical, Virus, electroporation. Practical application of somatic hybridization and cybridization. Techniques and applications of somatic embryogenesis and regeneration of plants, anther, pollen, ovule, endosperm, hairy root cultures. | 15 |
| III | Somatic variation, its genetic basis and application in crop improvement. Callus line selection for resistance to herbicide, stress and diseases. Role of tissue culture in rapid clonal propagation, production of pathogen-free plants and synthetic seeds. | 15 |
| IV | Plant transformation: Methods of gene transfer in plants. Agrobacterium and CaMV mediated gene transfer; direct gene transfer using PEG, micro injection, electroporation, microprojectile (biolistics) method, liposome mediated DNA delivery. Transgenic plants for crop improvement: Maize, Rice, Wheat, Cotton, Brinjal and Tomato. | 15 |

| <p style="text-align: center;">Subject : M.Sc. Botany 4th semester Course Code : Course Title : (i) Microbial Biotechnology B071009T</p> | | |
|---|---|--------------------------|
| <p>Course Objectives: The aim of this course is to enlighten the students about various microbes and their applications in industry as well to give a profound knowledge on fermentation technology, enzyme immobilization, etc.</p> | | |
| <p>Course Outcomes:</p> <ol style="list-style-type: none"> To understand the bioprocess engineering, basic techniques, method, reactions and industrial products. To know about the different microorganisms and their products (enzymes, polymers, metabolites, etc.) To learn about IPR (Patents, Copyrights, Trademarks, etc.) and its issues. Conceptualize the basics of evangeneisis and its role in directed evolution of microbes. | | |
| <p>Credits : 4 Credit Allocation : Max Marks : 30-70 Min. Passing Marks :</p> | | |
| <p>Total no. of Lectures-Tutorials-Practicals (in hours per week)/4-I-II</p> | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Virus addition in industrially important microorganisms using recombinant DNA technology. Fermentation technology; microbial growth, batch, fed batch and their continuous cultures of microbes, application of fermentation. Fermentation Economics. | 15 |
| II | Proteomics: Basic concept and importance. Metagenomics: types and applications. RNA Interference, Antisense RNA Technology, mRNA and Gene silencing. Munogenesis (site-directed & random), directed evolution of microbes. | 15 |
| III | Industrial sources of enzymes; Cellulases, Xylanases, Pectinases, Amylases, Lipases, and Proteases, their production and applications. Immobilization of microbial enzymes and whole cells and their applications in industry. Microbial applications in food, feed and dairy. Synthetic biology: A novel approach for Microbiology with example. | 15 |
| IV | Microbiology and up gradation of alcoholic beverages (i) C:H ratio balancing (ii) Trace elements (iii) RDT. Commercial production of important amino acids, insulin, steroids, vitamins and perfumes. Commercial production of antibiotics with special reference to penicillins, streptomycin and their derivatives. IPR (Patents, Copyrights, Trademarks) & its issues, WIPO (world intellectual property rights). | 15 |

|--|--|--------------------------|
| Course Code : B0410101 | Course Title : (d) Herbal Products | |
| Objectives: To study preparation herbal medicinal product and herbal cosmetics | | |
| Course outcome: Upon completion of the course, the students shall be able to understand following | | |
| <ol style="list-style-type: none"> Key ingredients used in herbal products and cosmetics Key building blocks for various herbal formulations Various key ingredients and basic science to develop aromatherapy, cosmetics, cosmeceuticals. Scientific knowledge to develop cosmetics and cosmeceuticals with desired Safety, stability, and efficacy | | |
| Credits : 4 | Care elective | |
| Max Marks : 30+70 | Min. Passing Marks : | |
| Total no of Lectures-Tutorials-Practicals (in hours per week): 4-0-0 | | |
| Unit | Topic | No. of Lectures (60 hrs) |
| I | Herbs as raw materials: Definition of herb, herbal medicine, herbal medicinal product, herbal drug preparation. Source of Herbs. Selection, identification and authentication of/herbal materials. Processing of herbal raw material. Preparation of Decoction, Infusion, Fluid extract, Tincture, Aromatic water, Hair care Botanicals, Herbal Ointm, Herbal Shampoo, Herbal Syrup. | 15 |
| II | Herbal Cosmetics: Scope, Formulation development and quality control of Herbal cosmetics used in: Hair care, skin care, anti-wrinkles & anti-aging. | 15 |
| III | Herbs in cosmetics: A brief account of following herbs or herb extracts or herbal products of cosmetic importance such as Azadirachta indica, Aloe Vera, Almond oil, Neem, Curcuma zeylanica, Henna, Turmeric, Liquorice, Olive oil, tea tree oil and wheat germ oil with special emphasis on their source, active principles and cosmetic properties. | 15 |
| IV | Herbal formulations: Conventional herbal formulations like syrups, mixtures and tablets and Novel dosage forms like phytoemulsion. Aromatherapy: Various essential oils used in Aromatherapy with their Significance. Evaluation of Drugs: WHO & ICH guidelines for the assessment of herbal drugs Stability testing of herbal drugs. | 15 |

| Subject : M.Sc. Botany 4 th semester | | |
|---|--|---------------------------|
| Course Code: B64141P | Course Title : Practical Lab 4 | |
| Objective: To perform 20 experiments from the given list (at least 6 experiments from each unit). | | |
| Course outcome: Upon completion of the course, the students shall be able to learn following:- | | |
| 1. Herbal preparations. 2. Pollen & pollen germination. 3. Ethnomedicinal plants & test related to Glycobiology | | |
| Credits : 4 | Core mandatory | |
| Max Marks : 30+20 | Min. Passing Marks : | |
| Total no of Lectures-Tutorials-Practicals (in hours per week): 0-0-04 | | |
| Unit | Topic | No. of Lectures (129 hrs) |
| I | 1. Preparation and evaluation of gels like Shaving gel, Anti dandruff Shampoo and Hair styling gels. 2. Preparation of Mouth washes. 3. Preparation and evaluation of Cold Creams, Vanishing Creams. 4. Preparation of Hand and Body Lotions. 5. Preparation and evaluation of Face Masks. 6. Preparation of Hair oil to prevent hair fall. 7. Preparation and evaluation of After sun Gel. 8. Preparation of Antiseptic cream (Tinocid). 9. Preparation and evaluation of Perfumes. 10. Preparation and evaluation of Herbal Herbs. 11. Preparation of essential oils used in Aromatherapy. | 40 |
| II | 1. Weddhouse technique and preparation of temporary pollen slides. 2. Acetolysis technique and Preparation of Permanent pollen slides. 3. Study of autolyzed pollen preparation of the following pollen types- i) <i>Hibiscus</i> ii) <i>Gomphrena</i> iii) <i>Brunnica</i> iv) <i>Eucalyptus</i> v) <i>Pollinia</i> vi) <i>Sesamum</i> vii) <i>Chenopodium</i> viii) <i>Tribulus</i> ix) <i>Perviraria</i> x) <i>Boerhaavia</i> xi) <i>Cocculus</i> xii) <i>Borassus</i> . 4. Pollen production, pollen viability, pollen germination in vitro and pollen tube growth. | 40 |
| III | 1. Plant tissue culture-based exercise. 2. Study of ethnobotanically important plant of your locality. 3. Simple chemical tests in detect biological glycans. 4. Extraction of exocellular polysaccharides (EPS) from yeasts/fungi. 5. Quantitative Estimation of starch from plant storage organs. 6. Extraction of soluble lectins from any one plant and fungal source. | 40 |

7. Study of plant gums/Acidic polysaccharides.

Semester 4

Industrial Training/Research Project/Survey (Value Added)

Course Code: B941012 (Research Project)

Duration: 60 Hrs.

Course Objectives: The objective of this course is to provide students with hands-on training in specialized areas of plant sciences.

Course Outcomes: After completion of this course the students will acquire the following:

1. Training in experimental design and execution
2. Knowledge on techniques and tools of research
3. Designing of research proposal.
4. Writing of research and review paper

Content

The topic of the research project will be chosen from among the core compulsory courses/core elected courses of that year.

CHAUDHARY CHARAN SINGH UNIVERSITY, MEERUT
Proceedings of the meeting of Board of Studies in Botany held
on 11-01-2024

A meeting of Board of Studies (University Campus and Affiliated Colleges) in the subject of Botany in Chaudhary Charan Singh University, Meerut was held on January 11, 2024 at 11:00 AM in hybrid mode through Zoom App. The following members were present:

| | |
|--------------------------------|--|
| 1. Prof. Hira Krishna | Dean, Science faculty |
| 2. Prof. Vijai Malik | Convener-I |
| 3. Prof. Rup Narayan | Member |
| 4. Dr. Ramesh C. Arya | Convener-II |
| 5. Dr. Ramakant | Member |
| 6. Dr. Mrs. Poonam Palwal | Member |
| 7. Prof. Ashok Kumar | Member |
| 8. Prof. Sandip Kumar | External Expert |
| 9. Prof. Upendra Kumar | External Expert |
| 10. Prof. Navneet | External Expert |
| 11. Prof. Ashwani Goel (Retd.) | Principal |
| 12. Prof. Narendra Singh | Professor/Director of Research Institute |

The Board met for the revision of the syllabus of the subject Botany for MSc. courses. The Board unanimously revised the syllabus for the same after thorough discussions. The revised courses are applicable to the university campus and affiliated colleges of the University. A copy of the final revised syllabus is enclosed herewith.

(*Prof. Sandip Kumar)
External Expert

(Prof. Rup Narayan)

Member

(*Prof. Ashok Kumar)
Member

(*Prof. Hira Krishna)
Dean, Science faculty

(*Prof. Upendra Kumar)
External Expert

(Dr. Ramesh C. Arya)

Member
