BARAUT-250 611, BAGHPAT (U.P.)

NAAC Accredited "A" Grade College with " 3.39/4.00 C.G.P.A.

Ref. No. _____

Dated 04/05/22

Two Institutional Best Practices

- 1. Title of the Practice:** Promotion of Traditional Rural Games and Sports.
- 2. Objectives of the Practice-** Being the place of rich sports and gaming culture, we here at Janta Vedic College strongly believe and support development of sports culture in the campus. Thus apart from providing quality education we aim at overall personality development of students through traditional games and sports.
- 3. The Context-** Interest and involvement of students in sports are one of the key decider of their overall personality. Sports activities help to develop not only physical fitness but also mental health and alertness. It helps in character, leadership development at same time preparing a self-confident, self-disciplined citizen, leading to accomplishment of greater aims in their life.
- 4. The Practice-** The college is equipped with well managed play-ground stadium along with a separate department for promotion of sports activities i.e. department of physical education. Rural games and sports such as Shooting, Kho-Kho, kabaddi, and Archery are played and promoted by college. The college seeks the services of the professional shooters available in the area and provides necessary facilities to the aspiring youth. Like *kabaddi*, *kho-kho* is one of the oldest traditional outdoor games in this area quite popular at grass-root level. Our college has a very passionate team of kabaddi and Kho-Kho players. The college provides all possible facilities to the budding archers as well and encourages and supports the various sports team of college for their active participation in state and national level competitions.
- 5. Evidence of Success-** Our main purpose behind extending all facilities for the rural sports is to preserve and promote our traditional games and sports and bring them and keep them in national mainstream. We want to nurture rural talent in games and sports and help them build their career in games and sports. Various teams of the college have participated in college, intercollegiate and university level. Our Kho-Kho team has been university champion for many years.
- 6. Problems Encountered and Resources Required-** Due to our college being in rural area, the family responsibility comes on top of the students, due to which the students are not able to participate in sports in proper manner. They are not able to devote enough time to sports activities. Girls participation in sports is very less in our college due to maximum girls belongs to the rural areas. There should be adequate infrastructure, equipment and human resources in colleges to guide and train students in sports. Awareness of sports should be given to children and young people. Sports are not just for winning medals.

Practices - 2

Title of the Practice: Faculties are encouraged to have research collaboration and share the knowledge stock for the benefit of students.

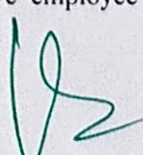

1. Objectives of the Practice- The main objectives of collaboration systems are to facilitate communication and teamwork among the members of an organization and across organizations. Research shows a positive correlation between collaborative papers and a high level of citations.

2. The Context- Research collaboration may provide opportunities for investigators to learn how approaches from complementary disciplines may be applied to existing problems, and lead to the development of innovative solutions. This may occur when discussions among colleagues stimulate new ideas.

3. The Practice- Collaboration improves the way your team works together and problem solves. This leads to more innovation, efficient processes, increased success, and improved communication. International collaboration enables researchers to access additional, often specific, expertise, gain new perspectives on research and build relationships with others in the field, which for early stage researchers can be key to career development.

4. Evidence of Success- Chemistry department of our college collaborate online/offline research with Dr. K.S. Singh, department of physics D. J. college, Baraut and another collaboration with Dr. Rohit John, department of chemistry, IIT (ISM), Dhanbad, Jharkand. From both the collaborations, students are getting new ideas and new opportunities for advance research. Workplace collaboration aims to improve communication, create a healthy and judgment-free work environment, and facilitate the free flow of information across the organization, and leads to increased productivity and employee efficiency. In its essence, collaborating and getting things done is workplace collaboration.

5. Problems Encountered and Resources Required- After thorough understanding of collaboration, it can be assumed that language, financial commitment, inadequate regulatory frameworks, and diverse interests are among the potential challenges in collaborative research. Some collaboration challenges such as Difficulty in achieving seamless communication, Lack of clear vision, The need to promote diversity, Developing trust among team members, Lack of productivity, Negative employee mindset, Employee hesitation and lack of compliance.
